

An experimentally-validated multi-scale materials, process and device modelling & design platform enabling non-expert access to open innovation in the Organic and Large Area Electronics Industry (MUSICODE)

Grand Agreement: 953187

Project Start Date: 01/01/2021

Project Duration: 48 months

**Deliverable 6.12**  
**In-depth model gap analysis for process**  
**modelling in OLAE**

**Date: 31-12-2024**

This project has received funding from the European Union's Horizon 2020 Research and Innovation Programme under the Call

DT-NMBP-11-2020 "Open Innovation Platform for Materials Modelling"

Project co-funded by the European Commission within Horizon 2020 Research and Innovation Programme		
Dissemination Level		
PU	Public	
PP	Restricted to other programme participants (including the Commission Service)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the consortium (excluding the Commission Services)	x

**Deliverable author(s):** Aron Kneer (TinniT), Elefterios Lidorikis (Uoi)

**Contributors** All

## Publishable summary

The MUSICODE project has fully achieved its goal of creating a cross-scale modelling platform. However, there is always need for more research in several respects to close gaps, establish the platform in a more flexible and industry-oriented manner, and increased automation to facilitate future expansions of it. As the final deliverable of the MUSICODE project, this document aims to highlight gaps identified, possible solutions, and envisioned future developments that will push the MUSICODE platform one step closer to the overarching goal of essentially becoming a full digital process management production facility in the organic electronics industry.
